S115

POWERFUL VACUUM CLEANER FOR PERFECT DEEP CLEANING

EXCELLENT PERFORMANCE AND DEEP CLEANING

The S115 combines excellent performance with easy handling, energy efficiency and **one of the most advanced filtration systems on the market**. It is ideal for filtering and removing allergy-causing dust, dirt and dust mites from carpets, furniture and other surfaces, making it **an effective choice for allergy and asthma sufferers**.

EFFECTIVE CLEANING

With the S115, it doesn't matter if the carpet fibre is too long or the groove too deep. With **optimal suction power settings**, it removes all dirt from floors, mattresses or upholstery.

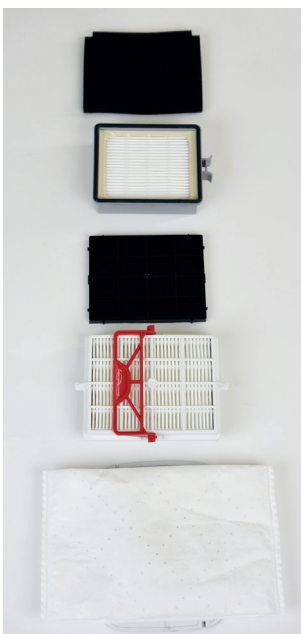

ENERGY-SAVING OPERATION

Thanks to the **automatic IPC system**, the S115 uses **only the amount of energy needed** to clean the surface. The optimised suction power and airflow means that dust bags need to be replaced less often and the motor life is extended.

DISPLAY

The icons on the display are easy to see from a distance. The LED **display shows information** about the selected mode or the current suction power of the S115. The display also indicates **when the dust bag is full, the filter needs to be changed, the appliance is in standby, the battery in operating handle on hose needs to be replaced or service is required**.

FIVE-STAGE FILTER SYSTEM

The S115 vacuum cleaner with multi-stage filtration system features **a multi-layer dust bag, an activated carbon filter combined with a HEPA filter and a filter and long-life filter after the motor** to effectively clean not only the surfaces of your home, but also the indoor air.

ERGONOMY

The vacuum cleaner is designed to take the strain off you with its **soft-touch ergonomic handle, adjustable telescopic hose and handy foot pedals**, so it's easy on your wrists, shoulders and back.

With buttons on operating handle on hose for easy handling, you can **easily switch the vacuum on or off, a separate button for IPC mode and manual suction power adjustment**.

INTELLIGENT POWER CONTROL - IPC

The IPC sensors **continuously monitor the vacuumed surfaces** and adjust the suction power and air delivery accordingly for maximum dust removal. You can easily clean smaller carpets and curtains, which the vacuum cleaner cleans properly but does not suck in.

Manual suction power setting

Use the buttons to manually increase or decrease the suction power.

Quality

The elegant stainless steel housing, high quality components and robust construction ensure longevity.

PRACTICAL, MULTIFUNCTIONAL ACCESSORIES, CREVICES

The **upholstery cleaning head** is the perfect aid for dusting, upholstery and curtain cleaning. With the **radiator brush and crevice**, you can access even the tightest places.

PARKING SYSTEM

The parking system for the vacuum cleaner is designed so that the vacuum cleaner hose can be conveniently parked. By sliding the floor cleaning head **into the parking slot on the front of the vacuum cleaner**, you can temporarily pause the operation of the vacuum cleaner. A **separate parking slot is available on the back** of the unit for storage.

AUTOMATIC FLOOR NOZZLE

The height of the brush of the automatic nozzle adapts to the surface to be cleaned. Thanks to its double rollers and good manoeuvrability, it cleans under low furniture without any problems.

OPTIONAL MOTORISED BRUSHES

PB115

The PB115 motor brush for carpets and floor cleaning can handle **all floortypes** thanks to the Powerclean and Sensiclean motorised brushes, which allow it to adapt to different hard flooring and carpets. In addition to dust removal, pet hair and bristles are no longer a problem. The **automatic brush control function, front search light, foot pedal and stop function** make your work easier.

PL115

The PL115 upholstery motor brush can easily “dust” even hard-to-clean upholstery and mattresses. It thoroughly **removes mites, deep dust and allergens** from these surfaces.
